

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PHASE 2: REQUIREMENT ANALYSIS

2.1 Stakeholder Analysis

Stakeholders

The source identifies the IT procurement team, hardware team, and users requesting standard laptops as relevant participants in the process.

2.2 Customer Journey

Journey

Standard Laptop selection → Order Now → Service Request → Approval → Requested Item → Catalog Task → Hardware team configuration activity.

2.3 Current Process Analysis

Current Process

The documented problem is a manual and inefficient procurement/configuration process in which standard laptop configuration can be delayed or overlooked.

2.4 Functional Requirements

Requirements

- Provide a Standard Laptop service catalog item.
- Allow users to place the request using Order Now.
- Trigger the Flow Designer flow from the Service Catalog.
- Create a Catalog Task after approval.
- Set short description and description to 'Laptop need to Configured'.
- Set Assignment group to Hardware.

- Use Approved as the approval condition for the task.

2.5 Non-Functional Requirements

Requirements

The source supports the goals of reduced manual intervention, timely configuration, improved resource utilization, and improved efficiency. Specific performance numbers or SLA targets are not provided in the source.

2.6 Solution Requirements

Solution Requirements

The solution requires ServiceNow, Flow Designer, the Standard Laptop Service Catalog item, a Service Catalog trigger, a Create Catalog Task action, an Approved condition, and the Hardware assignment group.

2.7 Technology Stack

Technology

Platform: ServiceNow

Automation: Flow Designer

Request interface: Service Catalog

Automation action: Create Catalog Task

Assignment group: Hardware
