

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PHASE 3:PROJECT DESIGN

3.1 System Architecture

Architecture

User → Service Catalog Standard Laptop → Service Request / Requested Item → Flow Designer → Create Catalog Task → Hardware Assignment Group → Laptop Configuration.

3.2 Process Flow Diagram

Process Flow

Standard Laptop → Order Now → Request Created → Approval → Approved → Create Catalog Task → Short Description/Description Updated → Assignment Group = Hardware → Task Available for Configuration.

3.3 Data Flow Diagram

Data Flow

The Requested Item Record is passed into the Create Catalog Task action. The table is automatically populated as Catalog Task. The task receives the short description, description, Assignment group, and Approval values configured in the action.

3.4 Workflow Design

Workflow

Trigger: Service Catalog.

Action: Create Catalog Task.

Request Item: Requested Item Record.

Short Description: Laptop need to Configured.

Description: Laptop need to Configured.

Assignment Group: Hardware.

Approval: Approved.

3.5 Flow Designer Design

Flow Name

Standard laptop task

Flow Properties

Application: Global

Run as: System user

Trigger

Service Catalog

Action

Create Catalog Task

Activation

Save the flow and activate it.

3.6 Service Catalog Design

Catalog Item

The source uses the Standard Laptop item under Service Catalog → Hardware. The user selects Standard Laptop and clicks Order Now to place the request.

3.7 Notification & Approval Design

Approval

The request is opened through the Request Number and the Approvers section is used to approve the request. The flow creates the Catalog Task when the Approval value is Approved.
