

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PHASE 6: PROJECT TESTING

6.1 Test Plan

Test Plan

Validate the complete documented path from Standard Laptop request through approval and Catalog Task creation.

6.2 Test Cases

Test Cases

1. Standard Laptop item is available.
2. Order Now creates the request.
3. Request Number opens correctly.
4. Approvers section is available.
5. Approval can be set to Approved.
6. Requested Item can be opened.
7. Catalog Task is created.
8. Catalog Task shows the expected short description.
9. Catalog Task shows the expected description.
10. Assignment group is Hardware.

6.3 Functional Testing

Functional Validation

Verify that the configured Service Catalog trigger and Create Catalog Task action operate according to the documented workflow.

6.4 Flow Testing

Flow Validation

Verify that the Standard laptop task flow is active and executes for the Standard Laptop Service Catalog request.

6.5 Approval Testing

Approval Validation

Open the request, navigate to Approvers, approve the request, and verify that the approval value used by the flow is Approved.

6.6 Notification Testing

Notification Validation

The supplied source does not define a separate notification configuration or notification test. This section should be completed only if notification functionality is added to the implementation.

6.7 User Acceptance Testing

UAT

Validate that the request-to-task process meets the documented user story: automatic task generation and assignment to the Hardware team for configuration.

6.8 Test Results

Result

The source demonstrates final verification by opening the Catalog Tasks section and checking the updated status, short description, and assigned group. Record actual screenshots/results from the ServiceNow instance here.
