

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PHASE 8 PROJECT DEMONSTRATION

8.1.1 Introduction

The demonstration presents the working model of the project “**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer.**”

The demo shows how ServiceNow Flow Designer is used to automate the standard laptop procurement process from request submission to final completion.

8.1.2 Project Name

- **Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**

8.1.3 Purpose of the Demonstration

The purpose of the demonstration is to show the practical implementation of the automated IT procurement workflow.

The demonstration explains how a standard laptop request can be submitted, approved, processed, and completed through an automated ServiceNow workflow. It also demonstrates how Flow Designer reduces manual activities and improves the consistency and tracking of laptop requests.

8.1.4 Demonstration Sequence

The demonstration follows the sequence below:

Step 1 – Laptop Request Submission

The user submits a standard laptop request through the ServiceNow request interface by providing the required information.

Step 2 – Request Creation

After submission, a request is created in the system and the request details are recorded.

Step 3 – Flow Designer Trigger

The submitted request triggers the configured Flow Designer workflow.

Step 4 – Approval Process

The request is automatically sent to the appropriate approver for approval.

Step 5 – Automated Task Creation

Once the request is approved, Flow Designer automatically creates the required IT or procurement task.

Step 6 – Notification

The relevant users receive notifications about the request and its status.

Step 7 – Request Completion

The assigned task is processed and the laptop request is completed through the defined workflow.

8.1.5 Final Output

The final output of the demonstration is an automated standard laptop procurement workflow in ServiceNow.

The workflow successfully connects request submission, approval, task creation, notification, and completion into a structured process.

This demonstrates how Flow Designer can simplify the IT procurement process and reduce manual intervention.

8.1.6 Demonstration Video Link

The complete working demonstration of the project is available through the following Google Drive link:
